Full Description Report - Dataset

Habitat Value

ANZLIC

ANZVI0803005827

Title:	Habitat Value
Spatial Extent:	General - Victoria
Owner:	Department of Environment, Land, Water & Planning
Custodian:	Department of Environment, Land, Water & Planning
Data access:	Unclassified
Jurisdiction:	Victoria
Abstract:	Habitat Value is a modelled raster dataset that provides a view of relative biodiversity importance of all parts of the Victorian landscape. The dataset ranks each pixel in Victoria on a scale of 0-100, with lower ranked pixels having low predicted biodiversity values, and higher ranked pixels predicted to have higher biodiversity values. The main inputs to the dataset are habitat distribution models of vascular plants and vertebrate fauna. These input datasets were then analysed by Zonation v5 software utilising Core-Area Zonation: Maximum retention. This integrated information is important because decision-makers need access to an objective, comprehensive and spatially explicit view of the importance of biodiversity assets to enable comparison of locations across Victoria.

Purpose:

The information provided by Habitat Value is potentially useful for a wide range of decision makers and natural resource managers. Information about the relative value of biodiversity assets can help inform conservation decision-making processes, such as:

- prioritising areas for protection or conservation zoning
- avoidance of high biodiversity
- raising awareness of the spread of biodiversity values across Victoria

Data Currency Information:

Data Set Status:

Completed

Data Collection:

Collection Period:

2023-04-01 - 2024-10-14

Update Frequency:

As needed

Dataset Information:

Dataset Source:

Dataset Processing Details:

Positional Accuracy:

75x75m cells

Attribute Accuracy:

100% correct

Logical Consistency:

Completeness:

Statewide Victoria

Access:

Constraints:

None.

Stored Data Format:

DIGITAL - GeoTiff 3

Available Format Type:

DIGITAL - GeoTiff

Search:

Search Word:

- Environment
